

DESCRIPTION:

- Slotted plate allows user to attach Stack-rail at elevated location so that prestressing strand can pass above and/or below it
- Multiple slots provide adjustability in 1/2" increments to locate height of Stack-rail
- Wooden faceboard attaches to Stack-rail to create sideform
- Configuration avoids need for drilled clearance holes in aluminum rail
- Drill clearance holes in plywood only for prestressing strand
- Plate is reversible
- Magnet fastens to bottom set of slots
- Two or three magnets per bulkhead depending upon panel thickness
- Works for thicknesses to 12"
